

Luncheon Symposium

RES

September 30 (Fri), 12:40-13:30, Samda Hall (3F)

Research Ethics Symposium (*Korean)

Organizer : Young Chan Chae, Ph.D. (Ulsan National Institute of Science and Technology (UNIST), Korea)

Chair : Jae Ho Kim, Ph.D. (Pusan National University, Korea)

Recent advancements in biological sciences, such as stem cell-based bioengineering, human tissue derived organoid technology, personalized genome sequencing, and human genome editing have the potential to create more effective medical treatments for diseases. But as we progress toward this biotechnologically-driven medical future, we must consider

how ethical values can shape these advancements and vice versa. This symposium focuses on legal aspects of bioethics and will discuss how biological science continues to evolve ethically by Chief Researcher at Korea National Institute for Bioethics Policy(KoNIBP) Baik Sujin, Ph.D.

RES-1

12:40-13:30

Sujin, BAIK. Ph.D. (Korea National Institute for Bioethics Policy, Korea)

This lectures is a program that covers from the ethical underpinnings to central challenges in bioethics, law and policy for researchers who intends to conduct human materials. It is focus on the IRB review and Consent etc. based on the Bioethics and Safety Act.
